

Transforming Global Petrochemicals Through Open Access Market Hubs

Open Access Market Hubs

Enterprise Products has developed the world's first fully open access global hubs for ethylene and propylene in response to growing global demand for these products.

These hubs are modernizing how U.S. and International olefins markets transact by creating a true commodities marketplace.

Creating a true
commodities marketplace
for the world's producers,
consumers, and traders.

Unparalleled Connectivity

Enterprise Products is connecting all of the major olefins producers and consumers in the U.S. Gulf Coast to create a marketplace that is open and accessible to the entire world.

This is eliminating inefficiencies while simultaneously providing unprecedented transparency, liquidity, and reliability to market participants.

Proven Petrochemical Midstream Services

This unique combination of connectivity with the major petrochemical processing facilities along the U.S. Gulf Coast, extensive storage capacity and close proximity to export terminals is backed by a full range of proven petrochemical midstream services and operations experience from Enterprise. This includes pipeline transportation, underground storage, export and processing services.

Unparalleled Connectivity and Participation

01. MOST WELL-CONNECTED OLEFINS MARKET IN THE WORLD

Enterprise has created the world's most well-connected, accessible olefins market. This enables participants to be more responsive to operational needs and capture market opportunities.

02. BACKED BY A COMPREHENSIVE SUITE OF MIDSTREAM SERVICES

Enterprise is applying its proven midstream services model to petrochemicals, including pipeline transportation, storage, processing, and exports for ethylene, propylene and isobutylene.

03. LINKING NORTH AMERICAN PETROCHEMICALS TO GLOBAL MARKETS

Open access olefins hubs and midstream services from Enterprise enable participants around the globe to access the significant benefits of the U.S. petrochemicals market.

04. CREATING A TRUE COMMODITIES MARKETPLACE FOR OLEFINS

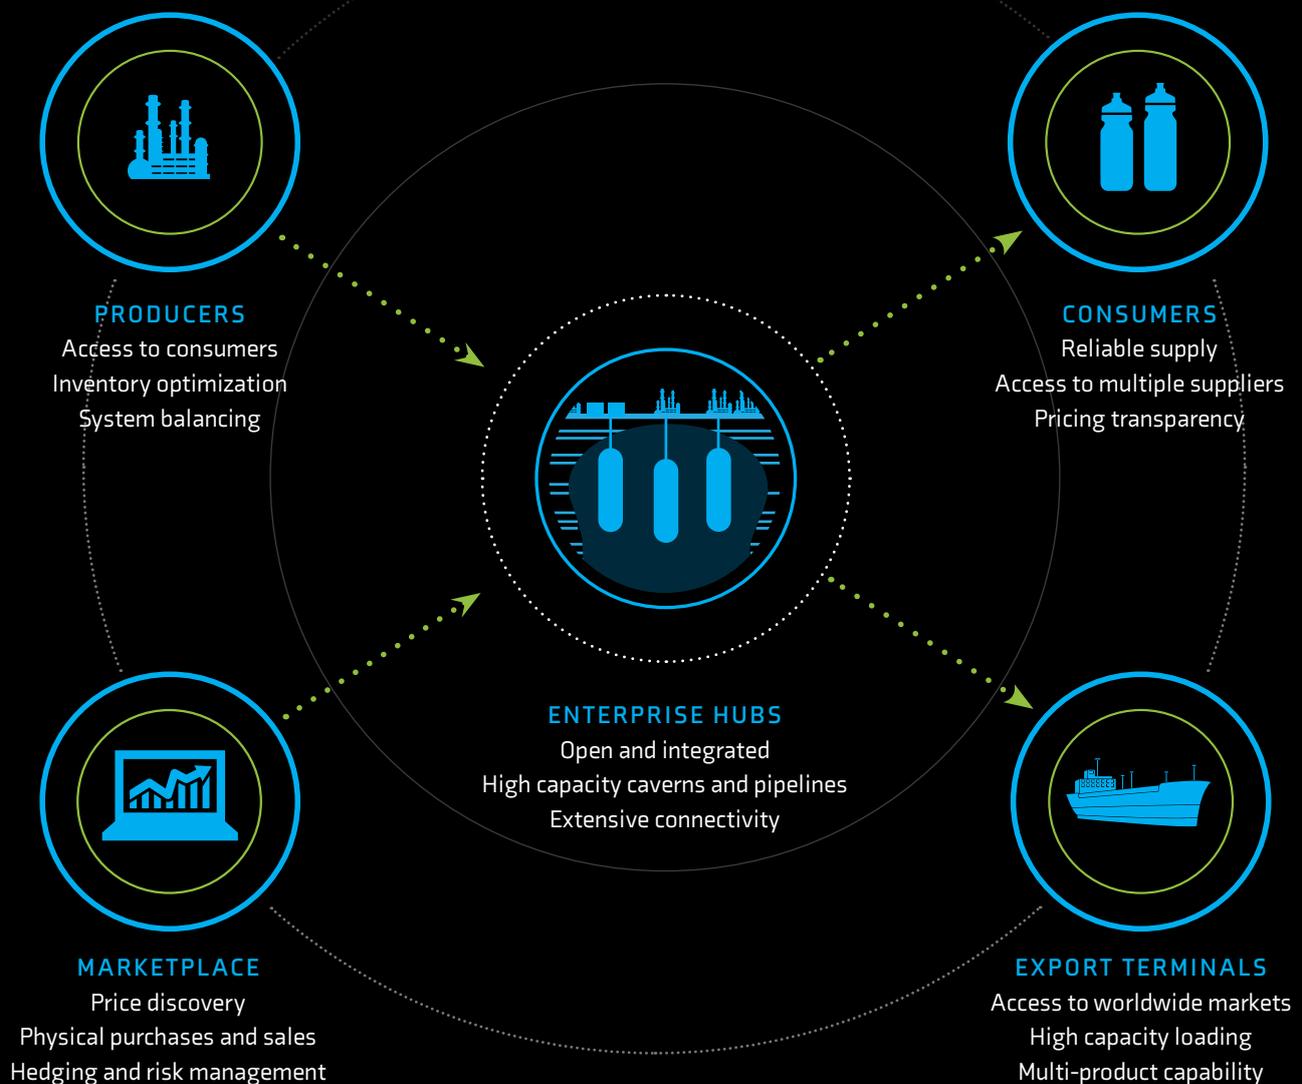

The Enterprise petrochemical hubs provide a unique combination of connectivity and participation. The result is transparent market pricing, improved risk management, and opportunities to buy, sell, and deliver products.

05. MOST COST-ADVANTAGED LOCATION FOR PETROCHEMICALS

The U.S. Gulf Coast is the most cost advantaged, stable location to produce ethylene and propylene in the world, with abundant and reliable supply of shale based feedstocks. Access to the Enterprise petrochemical hubs enables producers and consumers to continue to invest and grow.

Open Access Ethylene and Propylene Hubs

Benefits of Participation

UNMATCHED TRANSPARENCY

Enterprise is connecting major producers, consumers and related market participants, creating a robust marketplace that is open and accessible. The greatly improved visibility of domestic pricing coupled with the reliability available through the hubs provide the tools and insight needed to make decisions faster and with greater confidence.

DIRECT PRODUCTS TO THE HIGHEST VALUE END USE

Access to this open platform ensures that participants anywhere in the world can be more responsive to market demands. Storing olefins in the Enterprise hubs creates additional options for you to direct and deliver products to their highest value end use.

FOCUS ON YOUR COMPETITIVE ADVANTAGE

Reliable midstream services, including pipeline transportation, storage, processing and export services, provide dependability and flexibility. This enables participants to optimize inventory levels, reduce inefficiencies, and focus on unique competitive advantages.
